Updated data from last BoP .

NOTES: -Boost Pressure values of the tables are absolute pressure (bar A) for an ambient pressure of 1010 mbar. **Please refer to "Pboost Control Procedure" of next page.**

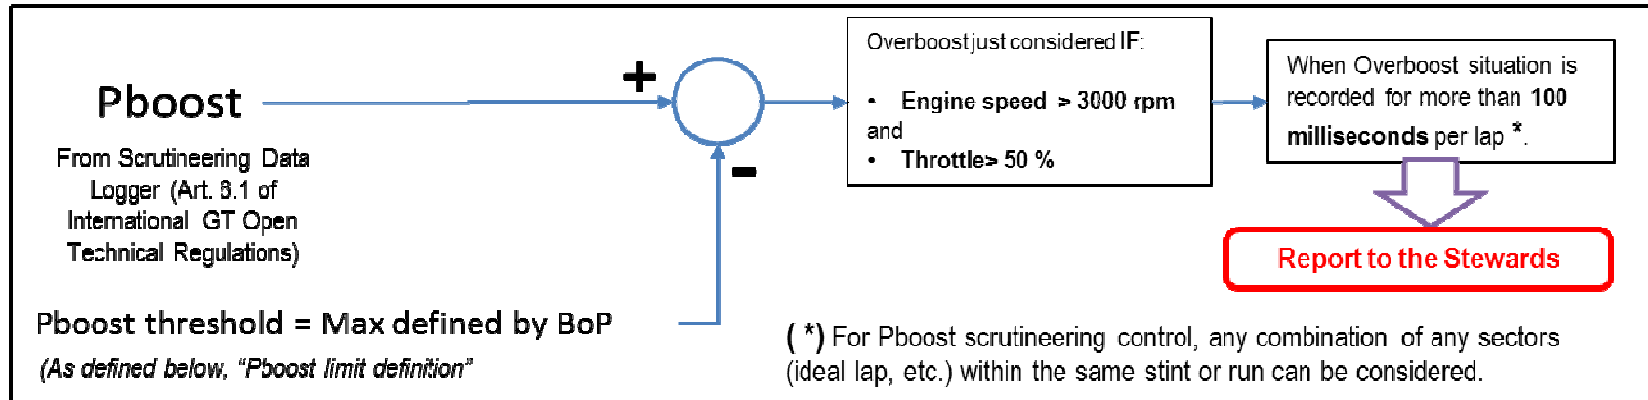

-The restrictor (s) dimension (s) are always the maximum values. In any case, it is possible to fit any restrictor (s), with smaller diameter (s) than those that are specified in the above BoP table.

-All the above mentioned dimensions for the restrictors are for those that have been previously approved and registered by FIA, or Int. GT Open Technical Commission.

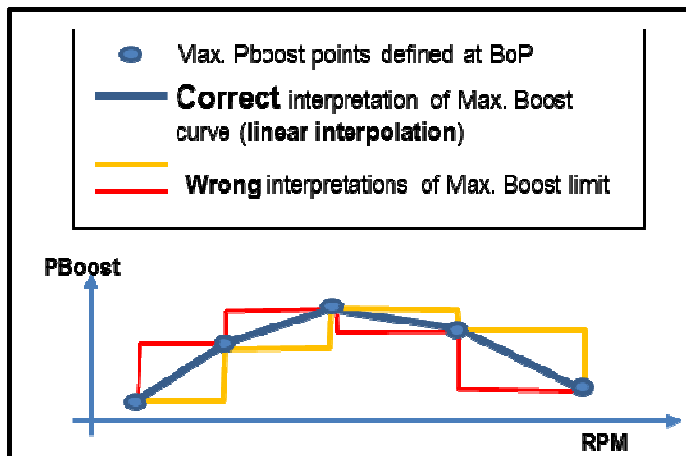

-As an important issue, and highly related to performance, please remind that all the vehicles must be according article nº 5 (noise) of General Technical Regulations

-**(1)** Config. [2 x 52,3 mm /1270 kg] & [2 x 54 mm /1290 kg] are also valid // **(2)** If restrictors of 2 x 40 mm, +20 kg of extra ballast (1340 kg min. weight) // **(3)** 2012 FIA 36 mm restr. also valid. / If 2012 eng. spec. -20 kg (min. Weight 1250 kg) // **(4)** If restrictors of 2x 43 mm, 1260 kg Min Weight // **(5)** Subjected to the BoP test to be held at Estoril on 24th and 25th of April

GT Open Pboost control procedure

Pboost limit definition

- BoP max. Pboost values are absolute ones (no tolerance applied) for an ambient pressure reference of **1010 mbar**.
- If real ambient pressure at the event is different from the reference value, the limit must be shifted, up or down, consequently (offset, not rate) . [Ej: if real ambient pressure at the event is 980 mbar, the limit must be decreased by 30 mbar (1010-980)].
- At each session, it will be considered as reference ambient pressure the one registered, and shown at the timing monitor, by the chrono team.

• For the **WHOLE EVENT**, it will be considered as reference ambient pressure the one declared and fixed by the Technical Commission of the Championship **BEFORE** the first Free Practice on Friday.
