Updated data from last BoP .

- NOTES:** -Boost Pressure values of the tables are absolute pressure (bar A) for an ambient pressure of 1010 mbar. **Please refer to “Pboost Control Procedure” of next page.**
- The restrictor (s) dimension (s) are always the maximum values. In any case, it is possible to fit any restrictor (s), of the same shape and design, with smaller diameter (s) than those that are specified in the above BoP table.
 - All the above-mentioned dimensions for the restrictors are for those that have been previously approved and registered by FIA, or Int. GT Open Technical Commission.
 - As an important issue, and highly related to performance, please remind that all the vehicles must be according article nº 5 (noise) of General Technical Regulations.
 - For all those vehicles that either were not at the official Winter Series BoP test, or have not entered enough races last season, the BoP could be adjusted during the event if found necessary.
 - For all those vehicles which engine does not reach the rpm limit of the corresponding column header of maximum boost pressure table, the value @ its rpm max will be interpolated.
- (*) Mandatory use of S9M tires
 (**) May use or not pages 5 & 6 of the 04/03/ER homologation extension.

GT Open Pboost control procedure

Pboost limit definition

- BoP max. Pboost values are absolute ones (no tolerance applied) for an ambient pressure reference of **1010 mbar**.
- If real ambient pressure at the event is different from the reference value, the limit must be gained, up or down, consequently (rate, not offset). [Ej: if real ambient pressure at the event is 980 mbar, the limit must be multiplied by 980 and divided by 1010].

• For the **WHOLE EVENT**, it will be considered as reference ambient pressure the one declared and fixed by the Technical Commission of the Championship **BEFORE** the first Free Practice on Friday.
